

WHAT IS CLAIMED IS:

1. A method for manufacturing a transparent acrylic container having colored bubbles, comprising the steps of:
 - (A) preforming a plurality of colored beads;
 - 5 (B) forming a container made of transparent acrylic material;
 - (C) adding a foam agent and the colored beads into the container during the forming process of the container, such that the foam agent produces a plurality of transparent bubbles in the container; and
 - (D) curing the container to produce a container product containing a
- 10 mixture of the transparent bubbles and the colored beads, thereby producing a visible effect of colored bubbles.
2. The method for manufacturing a transparent acrylic container having colored bubbles in accordance with claim 1, wherein in the step (A), each of the colored beads is made of transparent material.
- 15 3. The method for manufacturing a transparent acrylic container having colored bubbles in accordance with claim 1, wherein in the step (A), each of the colored beads can be heated under the temperature of 250°C.
4. The method for manufacturing a transparent acrylic container having colored bubbles in accordance with claim 1, wherein in the step (B), the
- 20 container can be heated under the temperature of 200°C.
5. The method for manufacturing a transparent acrylic container having colored bubbles in accordance with claim 1, wherein in the step (C), the

transparent bubbles are mixed with the colored beads so as to produce a visible effect of colored bubbles.

6. The method for manufacturing a transparent acrylic container having colored bubbles in accordance with claim 1, wherein in the step (D), the
5 mixture contains two third (2/3) of the transparent bubbles and one third (1/3) of the colored beads.

7. The method for manufacturing a transparent acrylic container having colored bubbles in accordance with claim 1, wherein the container has a heat resistance smaller than that of each of the colored beads.
